

Phase Separator

Pressure Adjustable

Stainless steel, over-head horizontal type vacuum jacketed cryogenic conditioning system designed to store LN₂ at user required pressure setting. Once the system has been set up, the liquid Level and pressure is automatically control by the controller. The controller comes with a HMI to allow user to set their required pressure.

Phase Separator - Pressure Adjustable

Pressure adjustable Phase Separator is used for stepping down the pressure of liquid nitrogen in the pipe line. This is done by venting out excessive vapor while maintaining a constant liquid supply capacity for downstream consumption. The result is a high quality, low pressure liquid nitrogen with precise temperature control at the user's point of use.

CSM Phase Separator is a vacuum insulated reservoir holding tank for liquid nitrogen with a pressure & level control system. The controller will operate its inlet proportional control valves to regulate the liquid level, and another vent proportional valve to regulate the user's required set pressure.

All Phase Separators comes with CSM renowned customer service, from conceptual design to implementation, and are backed by a one year warranty
